REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest a method for optimizing an illumination condition of a lithographic apparatus by computer simulation using isofocal compensation; selecting a simulation model, selecting a grid of source points in a pupil plane of the illuminator; calculating separate responses for individual source points, each of the responses representing a result of a single or series of simulations using the simulation model; calculating a metric representing variation of the separate responses for individual source points with defocus; and adjusting an illumination arrangement based on analysis of the metric in combination with all the other steps recited in independent claim 1.

The prior art does not disclose or suggest a processor to define a lithographic pattern to be printed on the substrate, to selected a grid of source points in a pupil plane of the illumination system, to calculate separate responses for individual source points, each of the responses representing a result of a single or series of simulation using a simulation model, to calculate a metric representing variation of the separate responses for individual source points with defocus; and to calculate an optimized illumination arrangement based on analysis of the metric; and a selectable variable beam controller that is adapted to modify a cross sectional intensity distribution in the projection beam exiting the illumination system in accordance with the

optimized illumination arrangement calculated by the processor in combination with all the other elements recited in independent claim 22.

The prior art does not disclose or suggest a machine readable medium with executable instructions for optimizing an illumination condition of an illuminator using isofocal compensation comprising: selecting a grid of source points in a pupil plane of the illuminator; calculating separate responses for individual source points, each of the responses representing a result of a single or series of simulations using the simulation model; calculating a metric representing variation of the separate responses for individual source points with defocus; and adjusting an illumination arrangement based on analysis of the metric in combination with all the other elements and executable instructions recited in independent claim 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
